

# Gain control. Overcome technology. Transform your travel management.

## Full-stack Developer

### About Atriis Technologies

Atriis provides the technology that enables travel management companies (TMCs) and corporate clients to manage all their travel needs quickly, intuitively, and cost-effectively. From seamless links with airline booking systems, to the largest range of hotel inventory, our technology provides the best possible customer experience, reducing complexity, time, and cost.

We are now embarking on a transformational change and growth programme tailored specifically to provide solutions to our clients' current and future needs. Our success is linked directly to the success and growth of our existing and new customers, and we align all our expertise, internal processes, sales, engineering, and implementation skills to achieve this.

### What we offer

Our leadership team sets the vision, purpose, and direction, and then allows you the freedom to perform at your best with support when you need it. We encourage innovation and ideas which fit with our values and impact customer success. You'll own your contributions and their success, while collaborating and supporting your colleagues.

Our standards of selection are high, and we carefully consider not only relevant technical skills, but also attitudes, values and culture fit.

If you match up, we offer a genuinely exciting career path and a competitive remuneration package.

### What you will achieve

As a full-stack Developer at Atriis, you will:

- Design, develop, test, and maintain back-end RESTful APIs using C#.Net, and responsive front ends using Vue.js, JavaScript, HTML5 and CSS3.
- Help refine and adhere to our coding standards, best practices, and guidelines to ensure code quality and maintainability.
- Collaborate with product managers, and other stakeholders to understand requirements, and contribute to architectural discussions and design decisions.

- Champion Test-Driven Development (TDD) principles, writing unit tests and integration tests to ensure software robustness, reliability, and maintainability.
- Help troubleshoot and resolve issues with production systems.
- Provide technical leadership and mentorship to less experienced developers, helping foster a culture of continuous learning and growth within the team.

### Who we are seeking

To be considered for the role you should:

- Have accumulated considerable knowledge and experience of software development (front-end and back-end) through a strong relevant engineering degree and at least 5 years of relevant working experience.
- Have 3+ years' experience of C#.Net development.
- Have 2+ years' experience of vue.js development.
- Be well-versed with TDD, unit testing and CI.
- Have worked as a member of a scrum team and have a good working knowledge of the key principles of scrum and agile methodologies in general.
- Be intimately familiar with good development practices and principles such as SOLID, DRY, YAGNI, SoC, and design patterns.
- Have reasonable experience of relational databases and a good working knowledge of SQL.

Familiarity with Azure is desired but not essential. Experience of the travel industry would be an advantage but also not essential.

### We have ambitious plans, join us!

Does the above sound like a role for you?

If yes, then we would very much like to meet you!

Please apply [here](https://bit.ly/atriis) [<https://bit.ly/atriis>] and we will promptly get back to you with next steps.

**Thank you.**
